WHO IS AIRBNB NOMAD

Airbnb is a community marketplace that lets you list, advertise,
and book cheap accommodation in more than 190 countries
online or from your smartphone.
 It is based on the "Bed and Breakfast" modality (where the "bnb" comes from).
It is one of the most successful systems of the collaborative economy –
 economic system in which goods and services
are shared and exchanged between individuals through digital platforms –.
This system allows the user to find accommodation, with the difference
that it will not be in a hotel but in the home of a person who may even be living in it.
The interesting thing is that you can rent
from common apartments to tree houses, igloos, geodomes, windmills, etc.

BOUT THIS PROJECT

The project shown below deals with a web page specifically designed to cover the tourist area
where we can find accommodation, it has been made under
the programming languages (HTML, CSS, JAVASCRIPT) for the AIRBNB client

BEFORE STARTING

The page below contains web technologies
images without copyright, if you want to know more
about this page contact any of the
authors of this page @mxxiell, @saymond, @jefferson

ASPECTS OF THE PAGE

HTML

In html we use
<img src= codes
to change
the images,
we change titles
specifying
what each
place is for
the file is index

CSS

in css we left
the default
template since it
was attractive
and aesthetic
and we did
not modify the code

JAVASCRIPT

We use Jv to
configure
the form,
insert the
data and
alerts appear

REPOSITORY OF THIS PROJECT

YOU CAN FIND THE REPOSITORY OF
THIS PROJECT IN @SAYMOND,
THE OWNERS AND DIRECTORS
OF THIS PROJECT ARE
@SAYMOND,@MAXIEL, @JEFFERSON, ANY CHANGES
CONTACT ANY OF THE PERSONS MENTIONED ABOVE

WHERE TO SEE THIS PROJECT
